

## Exercise 5: Mocking and Stubbing with Multiple Returns

### ExternalApi.java

```
public interface ExternalApi {  
    String getData();  
}
```

### MyService.java

```
public class MyService {  
  
    private ExternalApi api;  
  
    public MyService(ExternalApi api) {  
        this.api = api;  
    }  
  
    public String fetchData() {  
        return api.getData();  
    }  
}
```

### MyServiceTest.java

```
import static org.junit.jupiter.api.Assertions.assertEquals;  
import static org.mockito.Mockito.*;  
  
import org.junit.jupiter.api.Test;  
  
public class MyServiceTest {
```

```
@Test
public void testMultipleReturns() {

    ExternalApi mockApi = mock(ExternalApi.class);

    when(mockApi.getData())
        .thenReturn("First Call")
        .thenReturn("Second Call");

    MyService service = new MyService(mockApi);

    assertEquals("First Call", service.fetchData());
    assertEquals("Second Call", service.fetchData());
}
}
```
