

Exercise 7: Handling Void Methods with Exceptions

ExternalApi.java

```
public interface ExternalApi {  
    void deleteData();  
}
```

MyService.java

```
public class MyService {  
  
    private ExternalApi api;  
  
    public MyService(ExternalApi api) {  
        this.api = api;  
    }  
  
    public void delete() {  
        api.deleteData();  
    }  
}
```

MyServiceTest.java

```
import static org.junit.jupiter.api.Assertions.assertThrows;  
import static org.mockito.Mockito.*;  
  
import org.junit.jupiter.api.Test;  
  
public class MyServiceTest {
```

```
@Test
public void testVoidMethodException() {

    ExternalApi mockApi = mock(ExternalApi.class);

    doThrow(new RuntimeException("Delete Failed"))
        .when(mockApi)
        .deleteData();

    MyService service = new MyService(mockApi);

    assertThrows(RuntimeException.class, () -> {
        service.delete();
    });

    verify(mockApi).deleteData();
}
}
```
