

Exercise 3: Argument Matching

ExternalApi.java

```
public interface ExternalApi {  
    String getUser(String name);  
}
```

MyService.java

```
public class MyService {  
  
    private ExternalApi api;  
  
    public MyService(ExternalApi api) {  
        this.api = api;  
    }  
  
    public String fetchUser(String name) {  
        return api.getUser(name);  
    }  
}
```

MyServiceTest.java

```
import static org.junit.jupiter.api.Assertions.assertEquals;  
import static org.mockito.ArgumentMatchers.anyString;  
import static org.mockito.Mockito.*;  
  
import org.junit.jupiter.api.Test;  
  
public class MyServiceTest {  
  
    @Test  
    public void testArgumentMatcher() {  
  
        ExternalApi mockApi = mock(ExternalApi.class);  
  
        when(mockApi.getUser(anyString())).thenReturn("Valid User");  
  
        MyService service = new MyService(mockApi);  
    }  
}
```

```
String result = service.fetchUser("Kowshik");

assertEquals("Valid User", result);

verify(mockApi).getUser(anyString());
}
}
```
